Abstract

The research examines the employability of UK sport graduates through the factors that affect their transition into the sport industry. In order to gain an in depth understanding of these factors, case studies were undertaken of four sport science graduates and their transition into four sport organisations. The case studies were constructed using semi structured interviews with the graduates and significant others within their organisation (20 in total). The key findings suggest that employability is a complex phenomenon that is a synthesis of the interaction between the graduate, their employer and their job.
